Question - 1

Answer

Function to remove last generation of a tree.

```
void
root  removelastgeneration ( Node * root)
    {
        if ( !root) return;

        if ( ! root → left    && !root → right )
            {
                delete root ;
                root = NULL ;
                return ;
            }

        removelast generation ( root → left) ;
        remove lastgeneration ( root → right) ;

    }
```
